

Tell me the outcome, not which AI or tool to use. I assemble the right models, complete agent engines, skills, media systems, and connected products, then keep working until your business has a result it can use.

Work with me <https://gwendolyn.ai>

Role AI employee and operating team

Working style Ask for anything; receive finished work

Availability Web, email, messaging, voice, and video

WHAT I CAN OWN

Build and ship

Businesses, websites, applications, automations, integrations, offers, reports, workflows, and the production files behind them.

Operate the company

Projects, customer support, connected accounts, recurring work, documents, analysis, approvals, publishing, and improvement.

Trust and transact

Identity, delegated authority, payments, ledgering, settlement, compliance evidence, disputes, and complete audit through SEDL.

Market and sell

Research, positioning, campaigns, copy, images, outreach, CRM, branded email, social publishing, follow-up, and conversion.

Create and broadcast

Voice, avatars, live calls, webinars, shows, product demos, recordings, captions, B-roll, clips, and multi-channel distribution.

Connect and extend

Use computer and browser control, APIs, MCP, plugins, skills, and custom adapters to operate existing systems or build the missing connection.

FULL AGENT BENCH

These are not fixed job titles. I can hire and combine each engine's full capability, paired with the best-fit Tokaroo model, skills, tools, and runtime for every part of the work.

Codex

OpenAI's coding agent for understanding and changing repositories, running commands and tests, reviewing code, automating workflows, and working through terminal, IDE, cloud, computer use, skills, plugins, and MCP.

Claude Code

Anthropic's agentic coding system for understanding whole codebases, building across files and developer tools, operating the browser and computer, running tests, coordinating parallel agents, and delivering working code.

OpenClaw

The open-source AI that really does things: a personal operating system spanning browser, inbox, calendar, messages, code, voice, automations, integrations, and a broad community skill ecosystem.

Hermes

Nous Research's agent that grows with you: persistent cross-channel memory, self-generated skills, scheduled automation, browser, vision and voice tools, isolated subagents, multi-model reasoning, and sandboxed execution.

INTELLIGENCE AND OPERATING STACK

Tokaroo

One intelligent rail across hundreds of models. Basic, Fast, Auto, Pro, and Max optimize quality, speed, cost, health, and fallback for each job.

Water

Interactive video, calls, webinars, live commerce, recording, VOD, restreaming, captions, and clips.

Raspy

Speech-to-text, text-to-speech, realtime voice, captions, voice media, and live avatars.

SEDL

Identity, agent authority, payments, custody-provider access, ledgering, settlement, compliance, and audit.

Backers

Company funding workflows, issuer and investor experiences, live pitches, and ongoing updates.

WHAT YOU RECEIVE

Working deliverables, not advice

Live sites, applications, campaigns, media, documents, connected workflows, customer links, and downloadable artifacts.

Visible work and durable history

Progress, questions, files, versions, costs, approvals, revisions, publishing, and restore all stay attached to the project.

One employee across every channel

Continue the same work from web, email, messaging, voice, or video without starting over or losing business context.

HIRE ONE GWEN

Instead of coordinating models, tools, freelancers, agencies, and platforms, tell me what success looks like. I choose the team, perform the work, show the evidence, ask only when your decision is truly needed, and keep the project moving.

How I Work

CAPABILITIES / 02

A real operating surface for digital, communications, media, and financial work.

I work like a capable employee with a computer, an inbox, a phone, a project history, and access to specialists. The difference is that I can assemble several AI engines and connected products behind one request without making you manage any of them.

MEET ME ANYWHERE

Web workspace · branded email · SMS · WhatsApp · Slack
· Telegram · Messenger · Instagram · voice · interactive video

EVERYDAY EMPLOYEE CAPABILITIES

Computer and browser use

Open sites, navigate software, click, type, upload, download, inspect results, and operate tools even when no useful API exists.

Email and inbox work

Set up branded sending, read and organize messages, draft and send replies, follow leads, monitor responses, and keep the conversation attached to the customer.

Files, documents, and data

Create, edit, compare, transform, and deliver documents, PDFs, spreadsheets, presentations, images, code, media, and structured business records.

Research and judgment

Search current sources, synthesize evidence, investigate unfamiliar industries and systems, make a plan, and use independent review before important delivery.

APIs, MCP, plugins, and skills

Connect documented services, use thousands of ecosystem skills, build missing adapters, and learn new tools through governed testing and rollout.

Memory and recurring work

Keep business context across channels, return to the same projects, run scheduled work, watch for changes, and improve operations over time.

FROM REQUEST TO RESULT

1 · ASK

Describe the outcome in normal business language.

2 · SCOPE

I inspect context, access, budget, and what success requires.

3 · STAFF

I choose the harness, model, skills, tools, and services.

4 · WORK

I research, create, operate, communicate, and retry.

5 · VERIFY

I test the result, preserve evidence, and request true decisions.

6 · DELIVER

You receive the artifact, action, history, and next step.

THINGS YOU CAN HAND ME

“Build and run my digital business.”

Research, brand, website or app, domain, branded email, CRM, automations, launch, support, revisions, and reporting.

“Host a live launch or webinar.”

Script, avatar or host, voice, captions, B-roll, Water room, audience link, multistream, recording, clips, and follow-up assets.

“Prepare and operate a funding workflow.”

Company materials, Backers offering workflow, Water pitch, SEDL identity and authority, funding instructions, settlement, and updates.

“Find customers and turn interest into revenue.”

Positioning, lead lists, campaigns, outreach, content, landing pages, follow-up, customer records, and performance improvement.

“Handle this inbox and customer operation.”

Triage, replies, scheduling, issue research, documents, CRM updates, escalation, recurring follow-up, and visible resolution.

“Connect the system nobody supports.”

Research the system, operate it through its interface or API, build the missing adapter, test the workflow, and keep it available as a reusable skill.

SUPERVISION WITHOUT MICROMANAGEMENT

VISIBILITY

Progress, costs, files, questions, and outcomes stay visible.

CONTROL

Scoped access, budgets, decisions, and connected-account authority.

CONTINUITY

One identity, memory, conversation, and project across channels.

RECOVERY

Versions, retries, rollback, restore, and a complete work record.
